

Are We There Yet?

When it comes to energy independence, the answer is no.

- Gasoline costs nearly \$4 a gallon
- Oil prices remain at near-record highs - with no end in sight
- It's time for renewable fuels like sugarcane ethanol - that can reduce prices at the pump

This summer, families all across the nation hit the road and their wallets. America is at a crossroads and faces a choice. We can continue our dependence on oil from the Middle East - or diversify and promote renewable biofuels like sugarcane ethanol.

Cane ethanol can cut gas prices by 30% and reduce emissions by 90% compared to today's gasoline. Instead of embracing cane ethanol, our government is taxing it - imposing a tariff that drives up prices and keeps us dependent on Middle Eastern oil.

Congress Must Repeal the Cane Ethanol Tax - Or We'll Never Get There

Help America Get There
